

Environmental Mission Statement

Yamazaki Mazak is committed to environmentally sustainable business practices which drive us towards our objective of reducing the company's carbon footprint, increasing our competitive advantage, and preparing ourselves for any future changes to government environmental targets or regulations.

The company promotes and is committed to the continual improvement of its environmental performance and uses an Environmental Management System (ISO14001: 2015) to constantly assess its risks and opportunities. This is facilitated through the setting of documented environmental objectives and via the Energy Saving Opportunity Scheme (ESOS).

In addition, Mazak has a zero to landfill objective and a solvent reduction scheme to protect the environment, people and suppliers, ensuring compliance with all relevant obligations and legislation.

We constantly educate, train and assess our employees to ensure that they are able to fulfil their duties in an environmentally friendly way. We also ensure that our products are manufactured from reusable and recyclable materials and are energy efficient, in order to reduce the energy consumed by our customers during their machining operations.

As a company we are dedicated to environmental protection, to developing a sustainable future for our business and for the communities in which we operate. We pledge to continually maintain compliance with all current and future regulations and will strive to reduce our impact on the environment for all stakeholders.
